Work Experience

Front-End Engineer II

02/2020 to Present

Amazon

Seattle, WA

- Responsible for all front-end decisions in the Mobile Growth organization and ensure all products delivered are scalable and available to all Amazon customers globally.
- Consult across multiple teams to ensure strategies for success are aligned technologically.
- Provide support, resolution, and retrospective of any impacts to a customer's experience in production.
- Deliver delightful customer experiences across all ecosystems available, including web, app, and beyond.

Front-End Engineer II

09/2016 to 02/2020

Woot!

Seattle, WA

- Create top-tier products on the web and new app that have heart and personality to form trust and support from our customers.
- Lead architect for the company's modern front-end ecosystem that's led to a massive increase in feature development velocity.
- Provided support, resolution, and retrospective for any customer-facing issues in production.
- Mentored and educated in and around front-end technologies to increase the overall velocity of my team and others interacting with us.

Senior Front-End Developer

03/2014 to 08/2016

Curse

Huntsville, AL

- Create features for the entire network of sites supporting gamers across the world.
- Lead the modernization of the front-end stack in order to scale with the complexities of products to be delivered.
- Create internal tooling to help automate manual processes of legacy implementations.
- Review works alongside the design team to ensure the customer experience bar was being upheld.
